

API project week 1.
Test StartWars GET endpoints.

Test plan:

1. Create a new maven project with Junit, Cucumber, Apache HttpClient dependencies.
2. Write test cases to test Star Wars APIs:
 - **Films:** <https://swapi.dev/api/films>
 - **People:** <http://swapi.dev/api/people/>
 - **Luke Skywalker:** <http://swapi.dev/api/people/1/>
 - **Vehicles:** <http://swapi.dev/api/vehicles/>
3. Implement test cases with Cucumber scenarios. (**Pay attention to cucumber scenario structure and wording**).
4. Make sure you do positive and negative tests.
5. Verification should be based on status codes.
6. Add properties file to reuse baseURL and other possible properties.
7. Implement reporting and generate reports.

Extra Test www.reqres.in GET endpoints.

- Add Cucumber feature files with automated tests for **reqres.in** to:
 - “List Users”,
 - “Single User”,
 - “Single User not Found”,
 - “List Resources”,
 - “Single Resource”,
 - “Single Resource not Found” endpoints.
