

Java Loops Homework-10

TASK-1

Description

Create the int array with given numbers

10,4,3,55,32,145,443,234,98,32

Using scanner user to provide any number from given array, then remove the value from array and put 0 instead of that.

Example:

Given Number:

234

Output:

10, 4, 3, 55, 32, 145, 443, 0, 98, 32

TASK-2

Description

Using Scanner ask user to provide any string value and index number from the array.

Using for loop update value from array.

Example:

[Liam, Emma, Noah, Olivia, William]

Please enter String:

Lucas

Please enter index number:

3

Output:

[Liam, Emma, Noah, Lucas, William]

TASK-3

Description

Create one int array with size of 10 without any value. Using scanner ask user to provide the int value until you filled out the array with given numbers. Then print the array with all numbers.

```
Int [] numbers=new int[10];
```

Example:

Please enter the int number. You have 10 space in array:

11

Please enter the int number. You have 9 space in array:

43

Please enter the int number. You have 8 space in array:

77

.. keep continue to ask user until you don't have any space in the array.

TASK-4

Description

Write the application to find the second largest value from given array.

Example:

Given array value: 3,2,8,9,1,5,4,3,7,8,5,9,9

Output: 8
